- Performance Optimization
- Spare Parts, including Waukesha, Caterpillar and MTU Gas Engines
- Exchange Products for Screw Compressors and Gas Engines
- Ignition and Controls – Field Installations, Factory Authorized Repair Facilities, Panel Commissioning and Programming

Project

Exchange a Waukesha engine located in a remote operating region to bring production back on-stream in the shortest time possible.

Location

Northern Alberta, Canada

Result

Enerflex found the required engine model within its large parts inventory. Enerflex Mechanical Service along with Enerflex Compression and Power coordinated the logistics of transporting the 10,320-kg engine from Enerflex's manufacturing facility in Calgary, Canada to the field, and performed the installation and start-up. The engine was on-site within three days of the purchase order and was started three days after mechanical work began. The quick turnaround earned Enerflex five additional engine exchange bookings with the same customer.
